

**mutate()**

add a new dummy  
variable of departure  
delay greater than 15

**group\_by()**  
**index\_by()**  
prepare grouping for the  
variable `carrier` and  
index

**summarize()**

compute the tallies of  
on-time and delayed  
flights

**gather()**

gather two new  
variables into a long  
format
